SUMMARY

Staff DevOps Engineer and Infrastructure specialist with 7+ years of experience architecting and scaling cloud-native systems, agentic AI platforms, and high-availability blockchain networks across AWS, GCP, and multi-cloud environments. Proven track record in driving org-wide platform standards, automating CI/CD (ArgoCD, GitHub Actions) to cut deployment times by 90% (from 40 mins to 5 mins), and maintaining 99.95%+ uptime. Adept at turning compliance (SOC 2, ISO 27001) into engineering constraints rather than quarterly panics, cutting cloud costs by 35%+, and building internal platforms that engineering teams actually want to use.

SKILLS

- **Cloud Platforms:** AWS, GCP, Hetzner, Digital Ocean
- **DevOps:** Docker, EKS, GKE, Helm
- **Orchestration:** Terraform, Ansible
- **CI/CD:** GitHub Actions, Jenkins, Argo CD, Argo Rollouts
- **Observability and Monitoring:** Prometheus, Loki, Grafana, CloudWatch, Mimir, Tempo, Signoz
- **Networking:** Kong, Istio, External DNS, Cert Manager
- **Blockchain:** Cosmos, Ethereum, Polygon
- **API Management:** Apigee, AWS API Gateway, Kong API Gateway
- **Secrets Management:** HashiCorp Vault, External Secret Operator
- **Cloud Services:** EC2, Lambda, VPC, CloudFront, Route53, CloudFormation
- **Scripting Languages:** Shell/Bash, Rust, Python, Go (tooling/integration-level)
- **Agentic:** Langfuse, Laminar
- **IAM:** Logto, Okta

EXPERIENCE

Orbitronai — **Bengaluru / India**

Staff DevOps — ***10 2026 – Present***

*** Senior DevOps** — ***10 2025 – 09 2026***

- Architected infrastructure for an agentic AI platform spanning local development, serverless workloads, and Kubernetes across **3 products and 2 regions**.
- Scaled browser automation from **2 to 500+ concurrent end-to-end sessions**, enabling reliable execution across multiple products.
- Reduced cloud infrastructure costs by **42%** through legacy environment decommissioning and resource right-sizing.
- Delivered **3 versioned releases to EU enterprise production in under 10 days**, using phased cutovers, centralized Argo CD, hotfix pipelines, and rehearsed rollbacks.
- Audited **7 environments and 63 components**, identifying **195 unreferenced infrastructure resources and 35+ release-safety issues**, and developed a prioritized remediation plan.
- Standardized CI/CD practices across **26 repositories**, strengthening release controls and adopting GitHub App/OIDC authentication.
- Drove platform-wide reliability and standardization across 7 environments and 26 repositories, establishing consistent configuration, deployment controls, and release-safety guardrails.
- Supported **20+ developers as part of a 2-person DevOps team**, improving deployment reliability, infrastructure security, and engineering workflows.

Redacted (Freelance) **Dubai / UAE**
Senior DevOps & Solution Architect ***01 2025 – 10 2025***

- Orchestrated zero-downtime upgrade of 100+ blockchain nodes across 20+ networks by enabling push-based metrics monitoring. Reconfigured environments across 100+ instances to ensure chain database integrity and prevent state corruption.
- Managed and optimized AWS EC2, Hetzner, and multi-cloud infrastructure supporting 100+ instances, achieving 99.95% uptime through proactive monitoring and automation.
- Redesigned monitoring & alerting stack, improving system reliability from 99% to 99.9% and cutting incident response time by 30%.
- Optimized observability by replacing legacy tools with scalable solutions (Alloy/Grafana/Prometheus), cutting troubleshooting time by 50%.
- Spearheaded zero-downtime migration of 100+ instances to new services with full monitoring integration, boosting performance by 20%.
- Deployed and managed high-availability blockchain networks (Karak, Sui, Sei, Ronin, Mezo), maintaining 99.5%+ uptime.
- Developed and maintained secure deployment pipelines with role-based access and secrets rotation (Vault, ESO), enabling compliance-grade incident response and auditability.
- Built real-time dashboards (Grafana/Prometheus) for infrastructure visibility, improving operational transparency and decision speed by 35%.
- Operated HA AWS RDS instances powering real-time monitoring/alerting systems, achieving consistent 99.9% uptime across critical workloads.
- Developed custom automation scripts for disk cleanup and log rotation, reducing storage incidents by 40%

Fetch.ai **Cambridge / UK**
Devops Engineer ***06 2023 – 12 2024***

- Executed high-risk service mesh upgrade from Istio 1.8 to 1.17 across all production services with zero downtime; simultaneously upgraded Kubernetes clusters on GKE to resolve deprecated APIs and ensure long-term cluster compatibility.
- Spearheaded the migration of legacy CI/CD pipelines using ArgoCD and GitHub Actions. Documented 40+ applications, reducing deployment time from 40 minutes to 5 minutes by eliminating unnecessary components.
- Implemented robust observability stack using Prometheus, Grafana, and Loki, improving alert accuracy and reducing mean time to detect (MTTD).
- Engineered multi-regional Kubernetes clusters to support high scalability and availability, achieving 99.95% production uptime.
- Implemented Okta for 200+ members, enhancing security, user experience, and providing seamless access to platforms, adhering to the principle of least privilege.
- Accelerated blockchain node deployment velocity by 98.75%, slashing spin-up time from 8 hours down to just 6 minutes using custom snapshot automation and CSI storage drivers.
- Automated snapshot creation process for multiple blockchain networks, significantly reducing data corruption risk and eliminating hundreds of hours of manual work.
- Developed comprehensive on-call runbook and high-quality documentation to ensure effective incident response and resolution.
- Integrated kubecost operator to monitor and optimize overall Kubernetes infrastructure costs.
- Automated deployment of a complex cloud infrastructure using Terraform.
- Enhanced infrastructure standards by introducing DB operators, Istio service mesh, and Prometheus Operator. Implemented an observability stack, delivering multi-environment monitoring capabilities.

Syvora **Indore / India**
Devops Engineer ***03 2021 – 05 2023***

- Designed and orchestrated cloud infrastructure for the deployment of a highly scalable blockchain RPC-based SaaS handling 120 million daily transactions.
- Successfully delivered a Staking as a Service for a Cosmos validator, managing an initial balance of 1.2 million USD.
- Defined a secure architecture and implemented multiple isolated environments to ensure robust operational integrity.
- Developed a failover mechanism to guarantee high uptime for the blockchain nodes, ensuring continuous and reliable operation.
- Established comprehensive monitoring, logging, and alerting solutions to proactively manage the infrastructure.
- Identified and addressed potential issues leading to random block misses by the validator, enhancing overall system reliability.
- Introduced secure secret injection across various environments, enhancing secret management security.
- Implemented horizontal pod auto-scaling and cluster auto-scaling to ensure cost savings with high availability.
- Achieved zero downtime deployments/upgrades using Canary and Blue/Green rollout strategies in Kubernetes.
- Realized a significant 35% monthly cost savings through in-depth analysis and optimization of cloud architecture.
- Developed robust disaster recovery procedures to ensure resilience and continuity in case of unexpected events.
- Managed the infrastructure deployment for blockchain, overseeing its operational efficiency and reliability.
- Executed cloud migration plans with meticulous roadmaps and risk assessments, ensuring smooth transitions

---

Syvora **Indore / India**
Full Stack Developer ***01 2020 – 02 2021***

- Refactored backend API call flow, reducing third-party service calls by 40% and lowering monthly integration costs
- Built automated CI/CD pipelines using Jenkins and GitHub Actions, cutting manual deployment efforts by 60%
- Engineered single-click deployment process**s** with Python scripts and Helm, streamlining release cycles and minimizing human error
- Containerized legacy applications with Docker, reducing deployment times by 50% and increasing release velocity
- Designed and integrated scalable REST APIs and third-party services, enhancing platform capability and reducing user-reported issues by 25%
- Led zero-downtime database migration to PostgreSQL, improving data consistency and scalability across microservices

LEADERSHIP EXPERIENCE

Syvora Indore / India
Devops Engineer *03 2021 – 05 2023*

- Led a team of six, conducting sprints to ensure timely and high-quality deliverables.

- Formulated project roadmaps and allocated tasks based on team members' strengths and proactive engagement.
- Mentored peers on various DevOps tools and techniques, enhancing team expertise through knowledge-sharing sessions.

PERSONAL PROJECTS

Air Mouse — Webcam-Based Gesture Control

- Built a hands-free mouse-control application using webcam-based hand tracking to translate gestures into cursor movement and interaction.

Google Drive PDF Slideshow — Chrome Extension

- Developed a Chrome extension that launches Google Drive PDFs directly into a customizable slideshow, eliminating manual downloads and external PDF viewer workflows.

Galaxy360 — Immersive Wellness Experience

- Explored a Unity-based immersive experience designed to promote mental well-being and relaxation through a 360° cosmic environment, gyroscope-based navigation, and spatially positioned music.

EDUCATION & OTHER

Shri G S Institute of Technology & Science, India ***07 2018 – 05 2021***
Master of Computer Applications (**MCA**)

Makhanlal Chaturvedi National University, India ***07 2015 – 06 2018***
Bachelor of Computer Applications (**BCA**)

INTERESTS

Independent Software Development, Computer Vision, Creative Technology, 3D & Game Development, AI-Assisted Music Production, Gaming & Content Creation.
